Charles our Soueraign King, did begin his reigne ouer Great Brittain. Anno 1625. March the 27. and hath reigned two yeres compleate this year. 1627. March 26.

Venus Lucifer aut Phosphoros nuncupatur, quam Solem antecedit, aut eum oritur: Hesperos vero aut Vesper, quando solem insequitur atq; post eum occidit.

This Golden Planet Venus is Orientall, from the 15 of Febru. vntill the 26 day of Nouember following, so long shee is our bright Morning Starre before Sun rising, and thereof called *Lucifer*. On the 26. day of Nouember aforesaid, shee beginneth to be Occidentall, or our glittering Euening Starre, setting after the going downe of the Sun, and therof termed *Esperos vel vespers*, that is the Euening Star, continuing so vntill the 13. day of September, 1628.

**A most plain and easie Table shewing the true
time of the beginning, continuance, and yeares, since
the reigne of each King in this Land, from the Conquest,
vntill this yeare, 1627. Gathered forth of Chroni-
cles, and heretofore set forth by others
for profitable v/e.**

The Kinges names.	Began they reigne.	The time they reigned.	Since they reigne.

**Libra,
Reines and
Loynes**

**Sagittarius
Thighes.**

**Aquarius
The Legges**

Pisces The feet.

In the 7. or last colunne of this my Almanacke toward
the right hand, you haue the houre & min. of the sun rising
for euery day in the year, at London: which houres & min.
are halfe the length of the same night. For example: the 5.
of Ian, the Sun riseth at London at 8 of the clocke, & no
min. the length being doubled, maketh 16. houres and no
min. the length of that night. And to know the time of the
Sun setting in the same place throug the yeare, take the
houres & minutes found in the Almanacke for sun rising
from 12. and you shall haue the Sun setting left: which
being doubled, is the length of that day. Example: Ian.
the 5. day aforesaid, the sun riseth at 8. & no min. take
8. from 12. and there resteth 4 the houre of sun set that
day, 4 being doubled, maketh 8. hours, the length of that
day, and so of all the rest. This is very easie.

January hath xxii. daies.

The dayes of the month.	Weeks dayes.	Festivals dayes in vii. for Law daies, keeping of Fayres, &c.	The place the ☉ is in the Zodiac. & the day at noone.	The Aspects of the Moon, with the Planets, or word of course, for Physicians & others.	Full Sea at London-bridge.	The houre & minute of Sun-rising at London.	The houre & minute of Sun-setting at London.

March the Moone hath 30. daies

All Peares and Apples, Peaches, Milke, and Cheefe,
Salt meats, red-Deere, Hafe, Beeffe, and Goat ; all theefe
Are meats that breed ill blood and Melancholly,
If sicke you be, to feed on them were folly.

Aprill the Moone hath xxix. dayes.

Chuse wine you may shall serue you all the yeare,
 Well-sauour'd, tasting well, and colour'd cleare:
 Fiue qualities there are, wine's praise aduancing,
 Strong, beautifull, and fragrant, coole, and dancing.

May the Moone hath 30. dayes.

If in your drinke, you mingle Rew with Sage,
All poyson is expeld by power of those,
And if you would withall lusts heate asswage,
Adde to them two the gentle flow'r of Rose.

June the Moone hath 29. dayes.

In Spring your dinner must not much exceed,
 In Summers heate but little meate shall need:
 In Autumne beware you eate not too much fruite,
 With Winters cold, full meales do fittest suite.

July the Moone hath 30. dayes.

In great Consumptions learn'd Phyſitians thinke,
 'Tis good on Goats or Camels milke to drinke:
 Cowes Milke, and Sheepes do well; but yet an Affes
 Is beſt of all, and all the other paſſes.

August the Moone hath 30. dayes.

The choice of meats to health doth much auaille,
 First Veale is holosome meat, and breeds good blood:
 So Capon, Hen, and Chicken, Partridge, Quaille,
 The Pheasant, Woodcocke, Larke, and Thrush be good.

September the Moone hath 29. dayes.

Milke is for Agues and for head-Ach nought,
 Yet if from Agues fit you feele you free :
 Sweet Butter wholsome is, as some haue thought,
 To cleanse and purge some paines that inward bee.

October the Moone hath 30. dayes.

Cheefe is au heauy meat, grosse, and cold,
 And breedeth costiuenesse both new and old :
 For healthy men, may Cheefe be wholesome food,
 But for the weake and sickly, 'tis not good.

November the Moone hath 29. dayes.

Against the Collicke, take Nettle-seed and Hony,
Is Physicke, better none is had for mony :
It breedeth sleepe, stayes vomits, Flegmes doth soften,
It helps him of the Gout, that eates it often.

A Tide-Table, whereby is easily found the time of full Sea, at the cheefest Ports, in and adioyning to this Kingdome,

For these places adde houres and minutes,

Bristol, S. Mat. Font. Ostend, Blackenh.	0, 45
Grith, Lieth, Dunbar, Month. Egmo, Har. Silly.	1, 30
Salmo, Carnsey, Basko. S. Malo, Cinby, Lizard.	2, 25
Fox, waterford, Veghal, Corke, Kinsale.	2, 25
Lin, Dumber, Weymouth, Dartm. Lime, Sale.	3, 0
Montbray, Antwerp, Panboz, Bristoll, Lamton, Fulnes.	3, 0
Hilford, Wydgewo, Erwater, North-coast of Engl.	4, 30
Worls, Peterport, Harlew, Hag. Blanchey.	5, 15
Oraney, Poole, S. Ellens at the Flea, Emden.	6, 0
Dorpe, Redies, Casket, Lux, Lenoy.	6, 45
Bullen, Dover, Harwi, Parmouth, Alect, Wight.	7, 30
Dorfordnes Northforland.	7, 30
Callice, Calhozt, Rye, Winchesley, Gore-mre.	5, 14
Lands-end, Southampton, Quinbozow, Portsmouth.	9, 0
Willins, Flanders, Spits, the Sluce, along the Swine.	9, 0
But contrariwise, for these subtract Hou, and Min,	
Bedban, Berdin, the West end of the Noze.	2, 13
Grauel-end, Dofones, Tenes, Ramney, Ramkings.	2, 30
Dundee, S. Andzeoes, Lisbon, S. Lucas.	0, 45
Cimmo, Harlepo: Cadiz, Gascoigne, Brittain.	0, 0
Bilkey, Galizia, Portugall.	0, 0

The vse of this Table is easily had, by adding or subtracting the houres and minits from the time of the full-sea at London bridge, noted in the diarie of my Almanacke, in so doing it sheweth you the time of full-sea in all these places above noted: with this Caution, that Winds, Land-floods, the Moones Latitude, may bee an hinderance, or fortherance of the time, an houre more or lesse.

Since the happy returne of K. Charles from } Spain. October 6. }	4.
Since the last great plague in England. 1625. May.	2.

J Euphe-

Euphemismus, or boni ominis
captatio. *And some Astronomicall and
Geographicall notes for this
yeare. 1627.*

A declaration of all the Eclipses within this yeare
of Grace, 1627.

There will bee this yeare in superflue terra, or
upon the ouermost part of the earth, foure great
Eclipses of the two great lightes of Heauen: That
is, two of the Sunne, the eye of the World, and
naturall nourisher of all sensible and vegetable
Creature; and two of the Moone, the Lady of
the night: Ipsa est Regina & gubernatrix mundi: But they
will not be seene in our Horizon, nor in our Hemisphere of
England, thanks be to G D D. The first is of the Moone
the 21. day of Ianuary at night, by our English account;
but the 31. of the same moneth by the Forraigne, conspi-
cuous to the Orientall people of Asia.

The second is of the Sunne on the 5. day of February.
In the day, (by our English account; but the 15. day of the
same by the Gregorian,) very conspicuous to the innermost
parts of the Countrey of Magellanica.

The third is of the Moone. and is a totall Eclipse.
conspicuous in the Meridian of Mexico, and to the inha-
bitants of France, Spaine, and Ireland: This will be the
18. day of Iuly in our English account, but the 28. day of
the same moneth, according to the Gregorian. The begin-
ning of it will be at 14. minutes before the Sunne is up, and
upon our Horizon, and the end of it will bee at our 7. a
clocke 46 minutes in the morning, which will be when the
Moone is gone out of our light, whole continuance is al-
most 4 houres: the which morning the Sunne riseth at 4 a
clocke, and 15. minutes at London, so at that time the Sun

A Prognostication.

will be almost 3 houres and three quarters high, and therefore this Eclipse at this time not scene of us: and but a little of the same at the beginning.

The fourth Eclipse is of the Sunne the 1. day of August, by the English account, but the 21. of the same moneth by the Gregorian: It will bee lust at Sunn-rising; and apparantly scene in the Orientall Countreies from vs.

Saturne is retrograde from the first day of January, to the 16. of May, all the rest of the yeere he is direct.

Iupiter is retrograde from the 8. of March, unto the 9. of Iuly, all the rest of the yeere he is direct.

Mars doth labour in his Retrograde motion from the 5. of October to the 23. day of December, all the rest direct.

Venus is Retrograde from the 24. of January unto the 7. of March, all the rest of the yeare she is direct.

Mercury is retrograde from the 7. of January to the 30. of the same, and from the 4. of May to the 16. day of the same, and from the 28. of August to the 19. of September, All the rest of the yeere he is direct.

Note that Easter day will againe fall vpon the Lady day, or the 25. day of March, 21. yeares after this. Anno, 1649. A day large or naturall is 24. houres long. A day strict or ciuill, is 12. houres long, are there not 12 houres in the day: beginning at Sunne-rising on our Horizon, and endeth when the Sunne is gone off. The Hebrewes reckon their naturall day from evening to evening, the Romans: from mid night to mid-night, as wee English doe. The Athenians beginne at Sunne-set. The Babylonians at Sunne-rising, the Vmbrians and Astronomers at mid-day. The Church of England of an ancient custome beginneth the yeare the 25. day of March.

The difference of the length of the day in
seuerall places.

Due degree of Latitude in the stile, both answere vnder the Equinoctiall to 60. miles on earth. And in the same place the longest day in the yeare is but 12. houres. The longest day at ward-house, wherethe Pole is elevated 71. degrees, and our Centuriers that go into Moscovia do touch in their Gorge. their longest day in the yeare is 73. of our dayes long, without any night, which time of the yeare is, from the 6. day of May to the 18. of Iuly. The length of the day with them vnder the north pole, is in length halfe

Allestree. 1627.

halfe of our yeare together without any night: the other halfe of their yeare, is all night together without any day betwene.

In Greene-land the Sun setteth not in 2300. houres.

At { London } the longest { 16. houres, and 30. min.
 { Derby } day in the { 16. houres, and 44. min.
 { Yorke } ycere is { 16. houres, and 58. min.

A degree is a rate of proportion, and doth betoken the 360. part of any Circle. Now if the whole circumference of Heaven and also of the earth be 360. degrees, I demand of you, how many miles doth answer to 360. Degrees, every degree answering to 60. miles. Then multiplying 1800. by 360. there riseth 648000. which I divide by 30. and so the Quotient will be 21600. whereby I know that 21600. miles, doth answer unto 360. degrees in the skie; and this is under the Acquinoctiall.

The earths Diameter or greatest breadth is 6872 ¹¹/₁₁ miles. They that dwell 5400. miles from us, doe dwell a quarter of the earth from us; and they that dwell from us any manner of way, 10800. miles, they dwell halfe the compasse of the whole earth from us. You have also Auge and the opposite Auge, Vacuus cursus, that the time of the Moone being Savage, noted with the afore sayd words (Apog. vac. curs. Savage) many times in this Almanacke: I have declared the meaning of them in my Prognostication Anno 1620. And these passions or rather debilities Accidentall of the Moone, they be of great value, if there be truth in Astrology: Also, you have the aspects of the Planets, with the Moone, as the fall for the most part, for every day of the moneth noted with two letters A and P. A for before noone, and P for after noone.

Furthermore, the Heavens doe moove continually from the East to the West, and that motion is called the daily motion; and it is the measure of the common day. The Moone hath a severall motion from the West to the East every day, contrary to that mooving of the daily course and this motion is the full measure of a moone of dayes, and every quarter doth make a weeke. The Sunne and the other Planets also hath a peculiar motion every day from the West towards the East, which the Sunne doth accomplish in a yeare, and of this course the moneth (as March, April, May, &c, and the yeare taketh their measure and quantity; all which the Vulgar do not beleue.

Allestree. 1627.

Of divers sorts of Yeares, Moneths,
and Moones.

The equall Tropicall yeare beainneth the xi. day of March, at what time the Sunne entreteth the first minute of the Aequinoctiall signe Aries, containyng 365. daies, 5. houres, 55. minutes, 26. seconds.

The Syderall or Starry yeare, beainneth the tenth day of Aprill, containyng 365. daies, 6. houres, 9. minutes, &c.

The moneth Solar, is the space of time that the Sunne remayneth in one signe of the Zodiacue

The moneth of Paragation, is 27 daies, 7 houres, 43 minutes, 7 seconds, 13 thirds, 36 fourth, 55 fifts; and in this time the Moone goeth through the 12 signes of the Zodiacue, which is 12 times, and 10 daies in one yeare.

The Moone of Apparicion, and it is 18 daies, 02 4 weekes, and in the yeare there is of them 13, and one day.

The Moone Medicinall, is according to Galen, 26 daies and a halfe.

The Moone of Consecution, is 29 daies, 12 houres, and 44 minutes, 02 7 08 houres, and 44 minutes, and this is the time from change to change, through the whole yeare; and in one yeare there is of them 12, 10 daies, and 15 houres, although the Moone may change sometime in lesse time, and sometime in longer time, that is by the reason of the motions of the moone, that is, swift, meane, and slow.

Note that in one houre are 60 minutes. And she continueth her motion in one signe, according to her meane motion, 2 daies, 6 houres, and 33 minutes almost in her slow motion, 02 Apogzon, that is, when she is in her greatest Excentricy, 02 farthest point from the Center of the earth, and this point is named in the Arabrick tongue *Aux*, in the Greeke *αὐξήσις*, in Latin *Abis summa*, and in our English tongue *Auge*, (as I have noted unto you in my Booke 1620.) and at that time she is in motion 2 daies, 26 houres in one signe. And in her swift motion, 02 Perigeion *Ima abis dicitur*, 02 in her lowest part of her Orbe 02 Excentricy and nearest to the Center of the earth.

Allestree. 1627.

at what time he is in motion, & daies wanting 10 minutes in one signe of the Zodiack: And therefore how unprofitable, foolishly, unexperienced, vnllearned, and fantasticke minded are those, that yeare after yeare set forth in their Almanackes Perpetuall Tables for the true rising and setting of the Moone at all times: her coming to the South point, and to finde the houre of the night for every night in the yeare in a Sunne dyall by the Moone. And of the like minded are all those people, that doe hold opinion, that when we Diagnosticate of the change of the Ayre, and of many other things, wee doe nothing else but write according to our owne inventions, without any rules or reason in Astrology, to lead vs thereunto, &c.

Another sort there are, which doe beleue that we haue some rules invented by the Superstitious Jewes, and Egyptians, or such like; and therefore unlawfull for Christians that professe and practise the Gospell.

A third sort of people, (and that not the least number, as wise as my wines apaine strage) doe hold, that wee haue our knowledge by the Starres and Planets, &c. And therefore they say that certayne nights in the yeare, wee doe lye upon our backs in some open place, to view the Heavens, and thereby Iudge of the weather, and other things to come: which is absolutely false.

A Cronography of the foure quarters of this yeare. 1627.

I Solsticium Hyemale, the stay of the Sunne in winter, or our Winter Quarter, and according to Astronamy, entered the last yeare 1626. the 12. day of December, but more naturally in this our Northerne Climate, about the midst of November,) at what time the Sunne entered into the first minute of the imaginary cold and dry signe Capricorne, being the day-house of cold and malicious Saturne, the Sun being at that time declined from the Aequinoctiall line South, according to the obseruation of Tycho de Brache 23 degrees, 31 minutes, and 36 seconds, at which time with vs the dayes are at the shortest, and the nights at the longest in all our yeare.

The weather this quarter is like to be indifferent, in January 21, 22, is like to bee a great snow. February 9, 10. some store of wind, and raine. December is like to bee colde

A Prognostication.

cold and rainy. Diseases and paines in the reines, loynes, pecke, and throot: also drinke good Wine moderately without allay.

2. *Aequinoctium vernum*, or the Spring Quarter, be-
ginmeth Astronomically the eleventh day of March, and en-
deth the 11. of Iune, (but more naturally and truly with
vs about the 8 day of February,) at this time it is equall
day and night with vs. This is the season which bringeth
comfort to every living Creature, when the eye of the
World or bright Phoebus vssiterh the face of the earth with
his warme shine, the ayre becommeth temperate, pastures
greene, when the flowers of every field, and the blossomes of
Trees doe present their beauty to the eyes of the beholders,
at which time the birds sing, lambes play, the heartes of
men become more glad.

The disposition of this Quarter is like to beccols, and
something moyst, the beginning and the second weeke of
March, is very like to be many great and blustering winds,
with some haille and cold raine, towards the latter end of
the Spring more kindly weather. In this yeare is like to be
great flouds, the Sea is like to breake forth of its bounds.
In this yeare is like to bee many dangerous sicknesses a-
mong men, many women are like to dye of Travailing
with childe, deflowering of Virgins, the small seedes and
fruites of the earth are not like to prosper well, plenty of
wines, and good cheepe flesh: these are to be felt more be-
yond the Sea, then in England.

Solstitium Aestiuum, or the Summer Quarter, accor-
ding to Astronomy beghneth the 11 day of Iune, and en-
deth the 12. day of September, (or it beghneth more na-
turally in May) at what time the Sun beghneth to make
his South declination and to bee mounted up with vs to
the highest poynt of his ascendent, making with vs the
longest day and shortest night in all the yeare, being then
nearest to our Zenith, or verticall poynt, the Sun having
then his first ingresse into the first (scuple of the cold and
moist ekviall, and imaginary signe Cancer.

The weather this Quarter is like to bee indifferent or
temperate for the most part, except it bee for words and
knockes: some darke and frowning weather in the begin-
ning, some blustering blasts, but in August good Harvest
weather; and in the first weeke of Iune is like to be some
cold haille by an Antiporistasis.

4. The Autumpall *Aequinoctiall*, or Autumne Quarter,
beghneth

Allestree. 1627.

beginneeth Astronomically the 12. of September, and endeth the 11. day of December. Now the never resting Sunne entreth the first scruple of the second Aequinoctiall Imaginary signe Libra, a signe of the ayry triplicity, re-equalling our dayes and nights the second time.

The weather in September is likely to be many ruggad windes, to the great hurt in shaking of fruites, darke weather, with cold rayne: In October cold and rainy, flashings, shakings, and tremblings in the Heavens. In November is like to be great store of rafne, if not a floud, and towards the 24. 25. dayes, is signified great and fierce coldes.

Anatomy of wonder great I speake, and yet am dead,
Men sucke sweet iuice, from these blacke veines, which
mother wisedome bred.

Qui sapit, ille animum fortunæ præparat omni,
Præsumque potest arte leuare malum.

Certayne Physicall Obseruations.

The World consisteth either of things insensible, or of spirits, or visible, as the Heavens, the Elements, and the bodies composed of Elements, so if the foure humours, doe exceed or alter that proportion in mans body) that God created them at the beginning, either in quality, or quantity, then shortly commeth diseases and sickneses, and so decealeth. And wee may no lesse assure our selues, that the Moone hath under God, as a second and instrumentall cause, superiority and domination on the foure humours. Choller, Blood, Fleame, and Melancholy: Doctor Dec. in the 101. Aphorism. sapit thus: Luna potentissima est humidum rerum moderatrix, humidansq; exciatrix & effoctris. So that the best Doctors of doe hold the opinion that all the infirmities which naturally come to any man (and not by any mischance or suddaine accident) both proceed and come by the distemperance of the foure humours; so wee may well conclude, that if the head of a fountaine, both alter his course or be infected, then the adiacentiaall or belonging streames must needs differ either in quality or quantity. So likewise the Moone being of a passive quality, collecteth and retaineth the good or evill influence of that

A Prognostication.

that Planet to whom she is adioyned or applyeth, as well as she receiveth and retayneth the light of her husband the Sunne, as we see by prooffe every night in the yeare: As that famous Philosopher Hermes sayth in his Iatromathematikes: Luna vero Stella (sive benifica sive malifica fuerit) omnia applicuerit, illi suffragabitur. And because her Orbe is nearest unto the earth she lendeth vs the vertue and influence of all the other Planets; and so causeth the mutability and alteration of the weather, and of mens bodies, to good or euill. this or that, according to the nature of that Planet with whom shee is adioyned or configurated, and the part of the zodiacus wherein she is situated. Dicic Hippocrates, quod medicus primo aspiciet Luna, quando est plena lumine, quia tunc crescit sanguis & medulla in omni homine, & medulla in bestiis omnibus, & augmentem in Mari, & in cunctis mundanis rebus. The aforesayd things being well considered, as it is sayd in briefe, therefore let Physicians and Medicines bee ministered on such dayes and aspects of the Moone with the Planets as followeth, if you can know them.

If therefore thou desireth to helpe, strengthen, or comfort the vitall vertue or liuely power, whose seate is the heart, you must vse things temperately hot and dry, or hot and moist, and at such time as the Sunne is strong, and well affected with the friendly beames of Iupiter and Luna.

The naturall vertue governed by Iupiter, Venus, and Luna, and seated in the Liver. wherein are ingendred the foure humors (spoken on before) and is fortified especially by Iupiter if we vse hot and moist things, at such times as Iupiter is well disposed in the Horoscope or configurated with Venus and the Moone being fortunate.

The animall vertue distinguished into the intellectuall part which Mercury governes, the sensitive which the Moone with Iupiter and Venus do rule, is best comforted under the aforesayd Planets well disposed, and with medicines temperate and agreeable to their natures.

The vertue attractive (one of the foure lesse principall and subserving, reioycing in heate and drynesse, and is fortified by things of hote nature, the Moone passing under Aries and Sagitary and well aspected of Sol or Mars fortunate, or the Moone in any other signe so aspected, and Aries or Sagitary ascending.

The vertue retentive delighteth in cold and dry things

by

by the influence of Saturne, and best comforted, the Moone seated vnder Taurus, Virgo, or Scorpio, and applying with a friendly aspect vnto Saturne, or the Moone in another signe so aspected, and eyther Taurus or Scorpio ascending in the East point.

The vertue digestiue is best strengthened by heate and moysture, and the influence of Iupiter, and is best helpe when the Moone is vnder Gemini, Libra, or Aquary; and aspected of a friendly Planet, or if shee bee in some other signe, then it is fit that e, eyer Gemini, Libra, or Virgo, be rising in the ascendent.

The vertue expulsiue delighteth in coldnesse and moysture, and that by the influence of the Moone well affected and placed in Cancer, Scorpio, or Pisces, while one of these signes are ascending.

These things are apparent enough to well qualified Philolophers to proue the Sunne, Moone and Stars, are the instruments to worke vpon all compound bodies by their Motions, Revolutions, Periods, Situations, Conjunctions, Oppositions, Quartiles, Aspects, Stations, Retrogradations, Colonicall and Aconicall rising and setting; and therefore I referre you for this time to good and authentike Authors. The Heavens cause the earth to fructifie, and the Clouds drops farnesse.

Certaine profitable Rules, and briebe for Husbandry. Times, or generall rules of Husbandry, and Gardening, *superstitiously attributed to the Moone in the 12. Signes of the Zodiaque.*

Salomon sayth, He that obserueth the winde, shall not sow; and he that regardeth the clouds, shall not reape, ed est, with his Neighbour.

BUT Astrologers say, before you plant or graft, &c. consider the winde, for if it be in the North or East, it is perilous. And I say that for the planting, sowing, setting, reeking, and preserving of land, & things, places, and times of different

A Prognostication.

different nature, and quality are to be chosen: Non omnis fere omnia tellus. The premises considered, plant, and graft, the Moone increasing, in S , M , or V . Crescens enim luna humorem auget & corpora implet. Decrescens minuit & exhaeret.

Good to lye or geld Cattell, the moone increasing, in Ariele, Sagitarie, or Capricorne.

Good to sow or set all kinde of corne and seedes the Moone being extra impedimentum: in V , S , M , S , or V : If you sow in moist ground, or the nature of your seedes bee moist, the time is aptest after the full Moone; if it bee dry, it is better in the increase: But the seedes whose rootes be round, must be sowne, as Onions, Cabbages, or Turneps, &c. three or foure dayes before or after the full. Gather Apples and other fruits, herbes, and flowers, to haue them in most beauty, and greatest vertue, the moone at the full. Sow or set Garlick, Lettice, Parsnips, Carrets, Beale and Beanes, two or three dayes before or after the full moone. Sow seedes or herbes for store, in the increase, from February, vnto June. Good to set Timber for building, in the wane of the moone, for the auoyding of wormes, from midsummer vntill January. Good to plash headges, fell wood to burne, that the stocke may the better growe againe, the Moone increasing in V , or S . Cut Alders in February or March, the Moone in V , S , or S . Remoue trees in the same signes, all the last quarter, in November, September, or February. Dung your land that the weedes may not abound, in the last quarter. Sheare sheepe, cut downe your hay, and cut your hayre to growe the sooner, in the increase. Kill fat Swine neere the full Moone, for the fat, the better to endure the boyling.

Good for ablactions or weaning of children about the full, or the moone Vac. cur. for them to forget the pay or Nurse.

Wer that is cast into Prison, or shall fall into any sickness, the Moone in S , M , or M , is not like soone or easily to come forth or recover. A promise made will not lightly be kept; and rumours brought first to one, when the Moone mooueth vnder V , S , S , or V , will commonly prove false. Good to destroy cornes, haire, wennes, warts, and to pare the nasses: cut them in the last quarter of the D , and be in conjunction quartile or opposition with Saturne or Mars noted in my Almanacke thus: S H D S H D S S D
 S S D

Allestree. 1627.

¶ ¶ D. = H D. = ¶ D. For my part, I attribute nothing to
the time, but al honor and true worship to God that made
the time: whose glory and power is to bee extolled above
all Heathen gods. And so I end this year, with this say-
ing of the Poet Horace: Lib. 3. Ode, 3.

A man that's arm'd with constancy,
and verue hath in price,
Cares not a rush for frantiques fits,
of peoples fond device,
Ne frowning brow of Tyrant dreads,
no chance can him dismay,
Though Heaven & Earth run all to wrack,
he still is at one stay.

Laus Domino, Regi aeterna gloria.

GOD saue our gracious King CHARLES.

An Abstract of a Direction, Concerning
Reall Contracts.

WHosoever shall desire to Purchase or put to Sale, to take in Lease, or let to Farme, to Grant, Assigne, Set ouer, Exchange or otherwise to Contract or deale with or for any Lands, Leases, Manton Houses, Rents, Annuities, &c. Or to redeeme any such from danger of Forfeiture: may haue ready meanes for the accomplishment of what shall be desired, on the one part or on the other, in any the cases aforesayd, or the like.
